**ORDER NO.
ARP1688**

STEREO DOUBLE CASSETTE TAPE DECK AMPLIFIER

DC-Z82

MODEL DC-Z82 HAS SIX VERSIONS:

Type	Power requirement	Export destination
HB	AC220V, 240V (switchable)*	United Kingdom
HE	AC220V, 240V (switchable)*	European continent
HEZ	AC220V, 240V (switchable)*	West Germany
SD	AC110V, 120V-127V, 220V, 240V (switchable)	Kingdom of Saudi Arabia and general market
YP	AC240V only	Australia
KU	AC120V only	U.S.A.

*Change the jumper wires of assembly boards.

- This manual is applicable to the DC-Z82/HB and HE types.
- For HE type, refer to pages 81-82.
- For the other types, refer to additional service manuals.
- Ce manuel pour le service comprend les explications en français de réglage.
- Este manual de servicio trata del método ajuste escrito en español.

1. SAFETY INFORMATION

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

4. SCHEMATIC DIAGRAM AND P.C.BOARD CONNECTION DIAGRAM

4.1 OVER ALL SCHEMATIC DIAGRAM

WIRE CONNECTION DIAGRAM

1. RESISTORS:
Indicated in Ω , $\frac{1}{2}W$, $\frac{1}{4}W$, $\pm 5\%$ tolerance unless otherwise noted k: k Ω , M: M Ω , (F): $\pm 1\%$, (G): $\pm 2\%$, (K): $\pm 10\%$ (M): $\pm 20\%$ tolerance

2. CAPACITORS:
Indicated in capacity (μF)/voltage (V) unless otherwise noted p: pF
Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE, CURRENT:
Signal voltage at (40 W + 40 W 8 Ω) output (1 kHz)
DC voltage (V) at no input signal
Value in () is DC voltage at rated power.
mA: DC current at no input signal

4. OTHERS:
Signal route.
Adjusting point.
The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
* marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

Line Voltage Selection (FOR HB AND HE TYPES)

Line voltage can be changed with the following steps.

1. Disconnect the AC power cord.
2. Remove the top cover.
3. Change the position of the jumper wires A-E as follows.

Jumper wire	220 V	240 V
A	○	×
B	×	○
C	○	×
D	○	×
E	×	○

○: Be needed
×: Be needless

4. Stick the line voltage label on the rear panel.

5. ELECTRICAL PARTS LIST

NOTES:

- Parts without part number cannot be supplied.
- Parts marked by "©" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560 Ω	56×10^1	561.....	RD1/4PS Δ Δ Δ J
47k Ω	47×10^3	473.....	RD1/4PS Δ Δ Δ J
0.5 Ω	0R5.....		RN2H Δ Δ Δ K
1 Ω	010.....		RS1P Δ Δ Δ K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω	562×10^1	5621.....	RN1/4SR Δ Δ Δ Δ F
----------------	-------------------	-----------	---

CONNECT assembly

No parts are supplied with the connection assembly.

6. ADJUSTMENTS

Fig 6.1. Adjustment location

Fig 6.2. Adjustment location

- Adjustment and measurement are usually made in the AF Ass'y, unless specified otherwise.
- Set the graphic equalizer to OFF, the balance control to Center and the microphone mixing volume to MIN.
- The function should always be set to "TAPE" unless otherwise specified.

Adjustment of Mechanical System

- Test tape: STD-301 (3 kHz, 30 min.)
- Setting of double speed mode: Short-circuit TP801 and TP802 of the Control Ass'y. To release the mode, break the short circuit.

1. Adjustment of tape speed							
No.	Mode	Input signal & Test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1	PLAY	Playback the STD-301 tape to 3 kHz.	Deck I	DECK CTRL Ass'y VR801	TP-L (Lch)	Press the PLAY SW and adjust the frequency to 3010 Hz \pm 10 Hz. Make sure that the wow and flutter is within 0.2 %.	
2	PLAY (Double speed mode)			—		Press the PLAY SW in double speed mode and confirm that the frequency is 6000 Hz \pm 1000 Hz. Note down the figure.	Release the double speed mode after adjustment.
3	PLAY (Double speed mode)		Deck II	DECK CTRL Ass'y VR803	TP-R (Rch)	Press the PLAY SW in double speed mode and adjust the frequency to be within \pm 30 Hz of the figure recorded at step No. 2.	Release the double speed mode after adjustment.
4	PLAY			DECK CTRL Ass'y VR802		Press the PLAY SW and adjust the frequency to 3010 Hz \pm 10 Hz. Make sure that the wow and flutter is within 0.2 %.	

Adjustment of Electric System

■ Check and conduct the following before adjusting the electric system.

1. Adjustment of tape speed has been completed.
2. Clean and demagnetize the head using a head eraser.
3. When measured, the level should be 0 dBV = 1 Vrms.
4. Use side A of the specified tape for adjustment.
STD-331B: For adjustment of playback system.
STD-630: NORMAL blank tape
STD-620: CrO₂ blank tape
STD-610: METAL blank tape
5. Prepare the following measuring devices:
AC millivoltmeter, Low-frequency oscillator, Attenuator, Oscilloscope
6. Adjust both L and R channels, unless specified otherwise.
7. Set the DOLBY NR switches to OFF, unless specified otherwise.
8. Warm up the unit for several minutes before adjustment. Especially before adjusting the frequency characteristics of recording and playback, warm up for 3 to 5 minutes in REC/PLAY mode.
9. Make sure to follow the proper order of the adjustment procedure. Any change in the order may cause an imperfect result.

List of Adjustment

Deck I

1. Head azimuth adjustment
2. Playback level adjustment

Deck II

1. Head azimuth adjustment
2. Playback level adjustment
3. Adjustment frequency characteristics of recording/playback
4. Recording level adjustment

Checking of Decks II

1. Make sure the ALC is operating properly.

• Head Adjustment of Deck I

- Deck I is provided with an automatic tape selector mechanism.
- Note: Do not switch over FWD and REV while the driver is inserted.

1. Head Azimuth Adjustment

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (10 kHz, -20 dB).	Head azimuth adjustment screw (Fig. 6-4)	TP-L (Lch) TP-R (Rch)	Maximum playback signal level	Lock the screw with screw lock after completing adjustment.

2. Playback Level Adjustment

- Be sure to make a careful adjustment, as the adjustment determines the DOLBY NR level for playback.

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (315 Hz, 0 dB).	VR453 (Lch) VR454 (Rch)	TP-L (Lch) TP-R (Rch)	-6.7 dBV	

• Head Adjustment of Deck II

- Deck II is provided with an automatic tape selector mechanism.
- Note: Do not switch over FWD and REV while the driver is inserted.

1. Head Azimuth Adjustment

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (10 kHz, -20 dB).	Head azimuth adjustment screw (Fig. 6-4)	TP-L (Lch) TP-R (Rch)	Maximum playback signal level	Lock the screw with screw lock after completing adjustment.

2. Playback Level Adjustment

- Be sure to make a careful adjustment, as the adjustment determines the DOLBY NR level for playback.

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (315 Hz, 0 dB).	VR451 (Lch) VR452 (Rch)	TP-L (Lch) TP-R (Rch)	-6.7 dBV	

3. Adjustment of frequency characteristics of recording/playback

- As this procedure is for adjustment of the recording bias, be careful not to increase the distortion by under-adjusting the bias.

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Load the test tape STD-630 and set to record mode.	—	Area between ① and ② (AF Ass'y) shown in Fig. 6-1.	Confirm that the oscillation frequency is 105 kHz \pm 1 kHz.	If the adjustment value cannot be set within the specification, adjust the T581.
2	NORM	REC	Apply a signal of 315 Hz to the CD input terminal and set the function to "CD".	Input signal level	TP-L (Lch) TP-R (Rch)	-27.7 dBV	
3	NORM	REC/ PLAY	Record and playback the test tape STD-630 (315 Hz and 10 kHz).	VR411 (Lch) VR412 (Rch)	TP-L (Lch) TP-R (Rch)	Repeat the correction so that the playback level of 10 kHz remains 0 \pm 0.5 dB in relation to 315 Hz.	

4. Recording Level Adjustment

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Apply a signal of 315 Hz to the CD input terminal and set the function to "CD".	Input signal level	TP-L (Lch) TP-R (Rch)	-7.7 dBV	
2	NORM	REC/ PLAY	Record and playback the test tape STD-630 (315 Hz).	VR521 (Lch) VR522 (Rch)	TP-L (Lch) TP-R (Rch)	Repeat the recording and correction so that the playback level of 315 Hz is -6.7 dBV.	

• Checking Procedure for Deck II

1. Action of ALC

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Checking value	Remarks
1	NORM	REC	Apply a signal of 315 Hz to the CD input terminal and set the function to "CD".	Input signal level	TP-L (Lch) TP-R (Rch)	-7.7 dBV	
2				+10 dB against the input level of step 1.		-2.7 dBV \pm 2.5 dB	

7. IC INFORMATION

● Terminal function of PD3133

No.	Terminal name	I/O	Function		Active
1 5	S7 S11	0	Segment 7 Segment 11	Outputs segment control signals of the FL indicator.	H
6 12	G1 G7	0	Grid 1 Grid 7	Outputs grid control signals of the FL indicator (Rch).	H
13 17	G1 G5	0	Grid 1 Grid 7	Outputs grid control signals of the FL indicator (Lch).	H
18		I	Not used (pull-down with the resistor).		—
19		—	-27V power supply input for FL indicator control. If these -27V are not supplied when AC voltage of the filament is applied, the FL indicator will go off.		—
20 22	6G 8G	0	Grid 6 Grid 8	Outputs grid control signals of the FL indicator.	H
23	DIRECT	I	Direct detection When the DIRECT switch of the AMP is pressed and this terminal becomes "H" by Pin59 of the IC801(PDE029), turns the characteristics of the graphic EQ to flat.		H
24	SR	I	SR remote control signal input.		L
25	GE DATA	0	DATA	Outputs control signal of the IC603 (LC7522).	H/L
26	GE CLOCK	0	CLOCK		
27	POWER	I	Power supply detection. When the power is turned on and "H" is input to this terminal from Pin20 of the IC801(PDE029), it becomes operation mode. If "H" is not input (when "L"), it becomes backup mode.		H
28	A	0	A(Pin11)	Outputs control signal of the IC726 (TC4041BP).	H/L
29	B	0	B(Pin10)		
30	C	0	C(Pin9)		
31	SPA IN	I	Inputs the comparison result of the level comparator IC725 (NJM4558DXP). (decides whether Pin1 of the IC725 is "H" or "L"). (See Note1 on P.76).		H/L
32	VCC	—	+5V Power supply.		—

No.	Terminal name	I/O	Function		Active
33	A/D0(LSB)	0	LSB ┆ MSB	Outputs voltage for comparison of the comparator of the D/A converter (See Note1 on P.76).	H/L

54 ┆ 58	K02 ┆ K06	0	Outputs key scan signal.		L
59 ┆ 64	S1 ┆ S6	0	Outputs segment control signal of the FL indicator.		H

Note 1: Spectral Analyser Indication Unit

Spectral Analyser indication unit is as shown in Fig. 7-1.

The microcomputer IC771 (PD3133) and a comparator IC725 (NJM4558DXP) measure the Lch and Rch or respective band levels and control the level indication.

Thus, the channel level is measured one by one for every one band. When all bands of Lch and Rch are measured, the results will be displayed all at once. The measurement is made by repeating B.P.F. output RESET, Lch 15 kHz to 60 Hz, B.P.F. output RESET, Rch 15 kHz to 60 Hz, level indication, B.P.F. output RESET, Lch

Respective band levels of the Spectral Analyser are measured as follows: outputs reference voltage (V_{Ref}) for five times; decides whether the output from the comparator is "H" or "L"; specifies the fifth output of the reference voltage as the measuring level and decides in which point of 11 steps the level is positioned; displays the level.

Thus, the difference of measuring times for low level measurement and high level measurement can be eliminated to allow level measurement of the respective band by unit time.

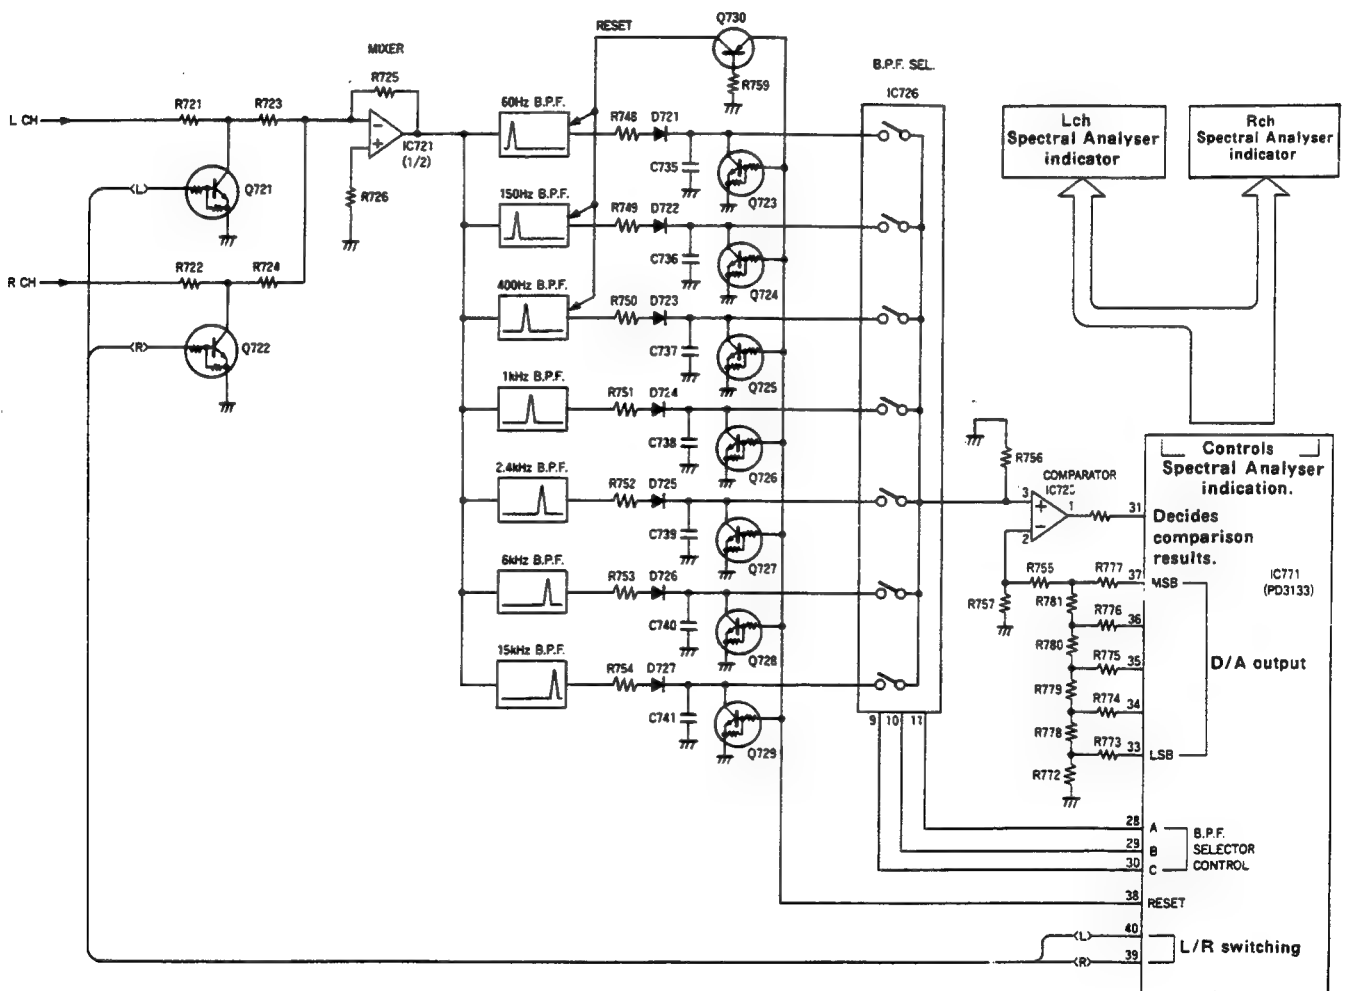

Fig.7-1 Block diagram of Spectral Analyser indication unit

Level measurement works, mentioned as below. 5 bit DATA "10000" (1/2 of maximum value, See Fig. 7-2.) puts out first from the D/A output of the Pins 33 to 37 of the IC771 (PD3133). The second DATA to be output is decided by "H" or "L" of the comparator output at this point. If the output is "H", the reference voltage (V_{Ref}) is lower. "11000", the intermediate value of "10000" (the first output) and the maximum value "11111", will be the second output. The third DATA to be output is decided by "H" or "L" of the comparator output at this point. If the output is "L", the reference voltage (V_{Ref}) is higher.

"10100", the intermediate value of "11000" (the second output) and "10000" (the first output), will be output third.

The fourth DATA to be output is decided by "H" and "L" of the comparator output at this point.

If the output is "L", the reference voltage (V_{Ref}) is still higher. "10010", the intermediate value of "10100" (the third output) and "10000" (the first output), will be output fourth.

Fig.7-2 Level measurement action

The fifth DATA to be output is decided by "H" and "L" of the comparator output at this point. If the output is "H", the reference voltage (V_{Ref}) is still lower. "10011", the intermediate value of "10010" (the fourth output) and "10100" (the third output), will be output fifth. The fifth DATA value "10011" is specified as the the result of measurement. Finally, how many points of Spectral Analyser should be lit up is decided from this DATA "10011". All bands of Lch and Rch are displayed all at once after measurement.

● Terminal Function of PDE029-C (DECK control microcomputer)

Note: I: CMOS input, N: Nch open drain output,

O: CMOS output, UN: Nch open drain output with pull-up MOS transistor

8. FOR HE TYPE

8.1 CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- Parts without part number cannot be supplied.
- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

The DC-Z82/HE type is the same as the DC-Z82/HB type with the exception of the following sections.

Mark	Symbol & Description	Part No.		Remarks
		DC-Z82/HB type	DC-Z82/HE type	
	POWER SUPPLY assembly	AWZ2241	AWZ2239	
	CONNECT assembly	Non supply	Non supply	
\triangle	FU2001 Fuse(T2A/250V)	AEK-511	AEK-017	
\triangle	FU2003 Fuse(T1. 6A/250V)	AEK-510	AEK-405	
\triangle	FU2004, FU2005 Fuse (T1. 25A/250V)	AEK-509	
\triangle	FU2004, FU2005 Fuse(T1. 25A/250V)	AEK-018	
\triangle	AC Power cord	ADG-063	ADG1021	
\triangle	Caution card	ARM1003	
	Operating instruction(English)	ARB1155	
	Operating instruction(English, German, French, Italian, Dutch, Swedish, Spanish, Portuguese)	ARE1109	
	Operating instruction(German)	ARC1127	

8.2 POWER SUPPLY assembly(AWZ2239;HE TYPE)

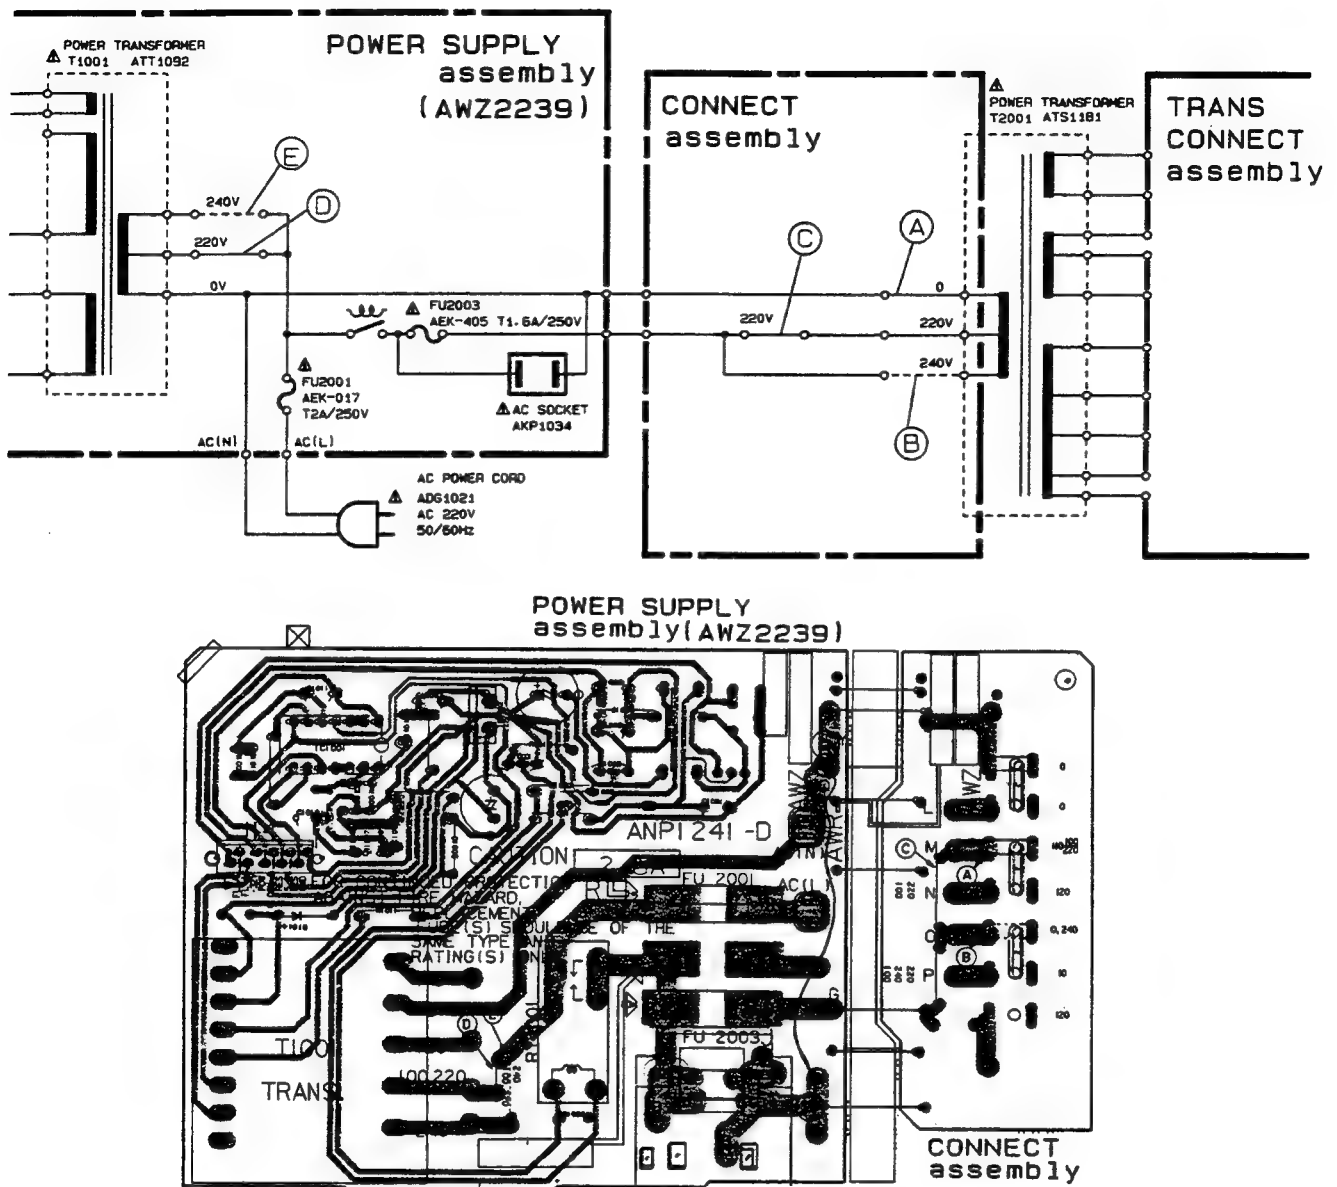

The POWER SUPPLY assembly(AWZ2239;HE TYPE) is the same as the POWER SUPPLY assembly(AWZ2241;HB TYPE) With the exception of the following sections.

Mark	Symbol & Description	Part No.		Remarks
		AWZ2241;HB type	AWZ2239;HE type	
\triangle	AC socket(OUTLET)	AKP1035	AKP1034	

8.3 CONNECT assembly(HE TYPE)

The difference in parts between the CONNECT assemblies HBtype and Hetype is only the jumper wire.

8.4 SCHEMATIC AND P.C.BOARDS DIAGRAM

Line Voltage Selection (FOR HB AND HE TYPES)

Line voltage can be changed with the following steps.

1. Disconnect the AC power cord.
2. Remove the top cover.
3. Change the position of the jumper wires (A-E) as follows.

Jumper wire	220V	240V
(A)	○	×
(B)	×	○
(C)	○	×
(D)	○	×
(E)	×	○

○: Be needed
×: Be needless

4. Stick the line voltage label on the rear panel.

Part No.	Description
AAX-193	220V label
AAX-192	240V label

9. CONNECTIONS

Refer to page 83 for the connections diagram.

- ① Accessory FM antenna
- ② Accessory AM loop antenna
- ③ FM/AM tuner (F-Z92 or F-Z92L)
- ④ Turntable (Separately sold PL-Z82 or PL-Z92)
- ⑤ Tuner input/output cord
- ⑥ Surround speaker system
- ⑦ CD player control cord
- ⑧ Cassette tape deck amplifier
- ⑨ Turntable output cord
- ⑩ Speakers cord
- ⑪ Speaker system
- ⑫ Power cord
- ⑬ CD player (Separately sold PD-Z72T or PD-Z82M)
- ⑭ Digital audio tape deck (DAT) or video cassette recorder (VCR)
- ⑮ AC wall socket

Plug the power cord into the AC wall socket outlet only after all the connections have been completed.

If the FM antenna of the FM/AM tuner terminal is a PAL connector only, then refer to connection diagram B.

Proceed as follows with the set-up and connections:

1. Place the cassette tape deck amplifier on top of the CD player.
2. Connect the CD player OUTPUT jacks to the cassette tape deck amplifier CD INPUT jacks with audio cords.
3. Place the tuner on top of the cassette tape deck amplifier.
4. Connect the tuner input/output cord ⑤ to the cassette tape deck amplifier.

TUNER CONNECTION

Insert the connector until it locks, thus ensuring that it is connected. When disconnecting the connector, pull it in the opposite direction while pressing the left and right claws.

If using this unit together with the optional PD-Z72T or PD-Z82M, connect the control cord ⑦.

5. Connect the FM antenna ① and the AM loop antenna ② to the tuner antenna terminals.
6. Place the turntable on top of the tuner.
7. Connect the turntable cords ⑨ to the cassette tape deck amplifier jacks.
If using this unit together with the optional PL-Z82 or PL-Z92, connect the turntable's audio cords and power supply cord respectively to the cassette tape deck amplifier's PHONO jacks and DC 12V OUTPUT jack.
If using a different turntable, connect the audio cord and earth cord.
8. Use the "DAT/VIDEO" jacks for connection to the audio input/output jacks of a DAT or VCR.
If connecting an LD player, connect the LD player audio output jacks to the "DAT/VIDEO" input jacks.

NOTE:

- Insert the plugs securely into the jacks. Improper connection can lead to sound distortion or malfunctioning.
 - The white plug is for the left channel connection and the red plug for the right channel connection.
9. Connect the speaker cords ⑩ to the SPEAKERS terminals.
Connect the "+" terminals on the cassette tape deck amplifier to the "+" terminals on the speakers, the "-" terminals on the cassette tape deck amplifier to the "-" terminals on the speakers.

Connecting the speaker cords.

NOTE:

Do not allow the conductors of the cords to project beyond the terminals and to come into contact with other conductors. A breakdown or failure may occur when conductors touch one another.

Speaker impedance

Connect speaker systems with a nominal impedance ranging from 6 to 16 Ω .

Surround speaker connection

Connect the plugs properly.

10. Finally, connect the power cord ⑫ to the AC wall socket ⑮.

What is surround sound?

With ordinary stereo, sound normally comes only from speakers in front of the listener. In a concert hall or theater, though, sound reflected from the walls and ceiling reaches the listener from all directions. This is what accounts for the feeling of ambience or spaciousness of a live performance. Surround sound works to reproduce these effects to produce fuller, more "live" sound.

STEREO WIDE

When the surround speakers are not connected, the stereo wide function will be activated. This function enhances the stereo effect. Note that it does not operate in the case of a monaural source, however.

Speaker System Placement Examples

The sound effects obtained in a surround system depend on speaker placement. Experiment with various arrangements to find the one most suited to your tastes.

Placing the speakers so that they are slightly higher than ear level contributes to sound quality.

[Case A]

Good sound dispersion; recommended for movies, etc.

[Case B]

Sound appears to come from directly in front of listener. Good for listening to music recordings.

[Case C]

Offers most varied effects; good for watching sports programs or listening to live recordings.

10. PANEL FACILITIES

DC-Z82

REAR PANEL FACILITIES

Cassette tape deck amplifier: DC-Z82

① TUNER jacks

Connect the F-Z92 (or F-Z92L) FM/AM tuner.

② TURNTABLE OUTPUT jack

This jack supplies power to the PL-Z82 or PL-Z92.

③ SURROUND SPEAKERS jacks

Connect the Surround speaker systems.

NOTE:

Connect a speaker system having a nominal impedance of 16 Ω or more.

④ SPEAKERS terminals

L: Connect the left speaker system as seen from the listening position.

R: Connect the right speaker system as seen from the listening position.

NOTE:

Connect a speaker system having a nominal impedance ranging from 6 Ω to 16 Ω .

⑤ Ground terminal (GND)

Connect this to the ground terminal on the turntable (except for PL-Z92 and PL-Z82).

⑥ PHONO input jacks

Connect the audio output cord on the turntable to these jacks.

⑦ DAT/VIDEO jacks

IN: Connect to audio output jacks of DAT, LD player or VCR, etc.

OUT: Connect to audio input jacks of DAT or VCR, etc.

⑧ CD input jacks

Connect to audio output jacks of CD player.

⑨ AC OUTLET (SWITCHED 100 W MAX)

Power supplied through these outlets is turned on and off by the cassette tape deck amplifier's POWER switch. Total electrical power consumption of connected equipment should not exceed 100 W.

NOTE:

Do not connect appliances with high power consumption such as heaters, irons, or television sets to the AC OUTLET in order to avoid overheating or fire risk.

This can cause the cassette tape deck amplifier to malfunction.

⑩ Power cord

Connect this to the AC wall socket.

FRONT PANEL FACILITIES

Cassette tape deck amplifier: DC-Z82

- This unit has an automatic tape selector function.
- Tapes can be played back on deck I; tapes can be played back and recorded on deck II.
- Sound can be recorded as adjusted by the graphic equalizer.

Amplifier section

① POWER STANDBY/ON switch

When this switch is set to the on position, power is supplied to the cassette tape deck amplifier's main circuit. The POWER unit's switch is geared to selecting the transformer's secondary so that even in STANDBY position, the unit's circuitry will work as long as the power cord is connected to a power outlet. Disconnect the power cord from the power outlet when you do not plan to use the unit for a long period of time. The unit is in STANDBY when the tuner section display indicates only the time.

② SURROUND & STEREO WIDE switch

When surround speaker systems are connected to the SURROUND SPEAKERS jacks at the rear: By turning this switch ON, you can enjoy surround reproduction.

When surround speaker systems are not connected: By turning this switch ON, you can enjoy STEREO WIDE reproduction with greater left-right spread.

NOTE:

- In the case of a monaural source, a SURROUND & STEREO WIDE effect cannot be obtained.
- SURROUND & STEREO WIDE function does not operate if CD DIRECT is on.

③ SURROUND & STEREO WIDE indicator

Lights when the SURROUND & STEREO WIDE switch is on.

④ CD DIRECT switch/indicator

Press this switch to listen to a CD without passing the signal through sound quality adjustment circuits.

⑤ VOLUME control

⑥ Headphone jack (PHONES)

For stereo headphone plug.

⑦ FUNCTION switches/indicators

[CD]

Press to listen to a CD player connected to the CD jacks.

[PHONO]

Press to play records on a turntable connected to the PHONO jacks.

[TUNER]

Press to listen to a radio broadcast.

[TAPE]

Press to listen to a cassette tape.

[DAT/VIDEO]

Press to listen to a stereo component connected to the DAT/VIDEO jacks.

⑧ BALANCE control

Usually set this control to the central position. If turned counterclockwise, the volume of the right channel will decrease. If turned clockwise, the volume of the left channel will decrease.

⑨ Microphone (MIC) jack

This is a standard jack for connecting a microphone.

⑩ MIXING LEVEL control

Use to adjust volume of microphone and playback sound.

Graphic Equalizer section

11 Graphic equalizer/Spectrum analyzer display

Ordinarily this shows the spectrum analyzer display. It shows a graphic equalizer display during operation of the EQUALIZING CONTROL switches.

12 MODE display

A EQ ON indicator

Lights when the EQUALIZER switch is set to ON. When this indicator is lit, the graphic equalizer can be used to adjust sound quality.

B MEMORY indicator

When the line is lit under "MEMORY," it indicates that the equalization curves memorized in the A/CAR and B/PHONES switches can be recalled.

C A, B indicators

Indicates which equalization curve is currently recalled.

A: Curve stored in A/CAR. (Preset CAR or Memory A)

B: Curve stored in B/PHONES. (Preset PHONES or Memory B)

D PRESET indicator

When the line is lit under "PRESET," it indicates that the equalization curves preset in the A/CAR and B/PHONES switches can be recalled.

13 EQUALIZING CONTROL switches

These strengthen or weaken the indicated frequency band. Press the upper switch to emphasize; press the lower switch to attenuate.

14 MEMORY switch

Use to store equalization curves in the memory recall switches (A/CAR or B/PHONES).

15 Memory recall switches

Use to recall equalization curves.

16 EQUALIZER switch

Turns the equalizer on and off. The EQ ON indicator lights when this switch is on.

17 PRESET/MEMORY switch

Determines whether the equalizer curves recalled by the Memory recall switches will be your own programmed memorized curves or the factory preset curves.

Cassette tape deck Section

18 Deck I cassette door

19 DOLBY* NR switch

Set this switch to the ON position to activate the DOLBY NR system.

- Tapes recorded using Dolby noise reduction should always be played back with the noise reduction system on. Sound quality will be adversely affected if they are played back with the system off, or if tapes recorded using a different noise reduction system are played back with the Dolby NR system on.

- It is recommended that tapes recorded using Dolby B NR be so marked on the label. This will help to prevent incorrect setting of the noise reduction switch during playback.

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.
"DOLBY" and the double-D symbol  are trademarks of Dolby Laboratories Licensing Corporation.

20 FADER switch

This switch is used to gradually fade out a recorded loaded tape in deck II. (The sound will be completely cut off after approximately 10 seconds and the tape will stop.)

21 Operation indicators

FADER: Lights when the FADER switch is on.

ASES: Lights when the ASES (Auto Synchro Editing System) is operating.

RECORDING: Lights when recording. Flashes when copying a tape.

Slow flashing — Normal copy

Rapid flashing — High speed copy

Direction (◀, ▶): Indicates direction of tape travel during recording or playback. Flashes slowly in pause mode. Flashes rapidly during Music Search (MS).

22 DECK II COUNTER

23 Counter reset switch

Press this switch to reset the Deck II tape counter display to 000.

24 ASES switch

Use to automatically record a CD on cassette tape.

The sound will fade out at the end of the tape.

25 REVERSE MODE switch

Switch position	During playback	During recording
REC RELAY PLAY	Plays both tape sides. When one deck finishes playback, the other side begins playback of both tape sides (6 times maximum). If there is a tape in only one deck, then that deck continuously plays both sides of the tape (6 times maximum).	Records on one side (Deck II only).
REC PLAY	Plays both sides continuously (6 times maximum).	Records on both sides (Deck II only).

26 Deck II Cassette door

②⑦ Deck I Operation switches

- ▶ **PLAY (FWD)** For playing back a tape in the forward mode.
- ◀ **PLAY (REV)** For playing back a tape in the reverse mode.
- **STOP** For stopping the tape.
- ▶▶ **FAST** Fast forward in forward mode, rewind in reverse mode.
Music search (MS) starts if this is pressed during playback.
- ◀◀ **FAST** Rewind in forward mode, fast forward in reverse mode.
Music search (MS) starts if this is pressed during playback.

②⑧ Deck I EJECT switch**②⑨ SYNCHRO COPY switches**

Use for tape copying.

NORM: Copying from the Deck I tape to the Deck II tape at normal recording/playback speed.

HIGH: Copying at about twice normal tape speed. (Copies can be made in about half the NORM time.)

③⑩ MUTE () switch (Deck II)

Use to create an unrecorded blank space between songs. The unrecorded space will be created for as long as this switch is kept depressed.

③⑪ REC (●) switch (Deck II)

Set to recording standby mode. Recording will then begin when you press the PLAY switch (◀ or ▶).

③⑫ PAUSE (II) switch (Deck II)

Temporarily stops tape travel. Cancels pause mode when pressed again.

③⑬ Deck II EJECT switch**③⑭ Deck II Operation switches**

- ▶ **PLAY (FWD)** For playing back a tape in the forward mode.
- ◀ **PLAY (REV)** For playing back a tape in the reverse mode.
- **STOP** For stopping the tape.
- ▶▶ **FAST** Fast forward in forward mode, rewind in reverse mode.
Music search (MS) starts if this is pressed during playback.
- ◀◀ **FAST** Rewind in forward mode, fast forward in reverse mode.
Music search (MS) starts if this is pressed during playback.

Remote control unit

① POWER key**② Function keys**

DAT/VIDEO Sets function to DAT/VIDEO.

PHONO Sets function to PHONO.

CD DIRECT Sets function to CD DIRECT.

③ DECK I operation keys

- ▶ Forward play
- ◀ Reverse play
- Stop
- ▶▶ Fast forward in forward mode, rewind in reverse mode.
Music search (MS) starts if this is pressed during playback.
- ◀◀ Rewind in forward mode, fast forward in reverse mode.
Music search (MS) starts if this is pressed during playback.

④ TUNER STATION keys

- Before operation, memorize broadcast stations in the STATION CALL switches.

+ Stations change in order in the upward direction

- Stations change in order in the downward direction.

⑤ Graphic equalizer (GEQ) operation keys

ON/OFF: Turns the equalizer on and off.

SELECT: Recalls the preset equalization curves (PRESET) and memorized equalization curves (MEMORY) in sequence.

⑥ VOLUME UP (+)/DOWN (-) keys**⑦ SURROUND key**

Turns SURROUND & STEREO WIDE on and off.

⑧ DECK II operation keys

- ▶ Forward play
- ◀ Reverse play
- ▶▶ Fast forward in forward mode, rewind in reverse mode.
Music search (MS) starts if this is pressed during playback.
- ◀◀ Rewind in forward mode, fast forward in reverse mode.
Music search (MS) starts if this is pressed during playback.
- Stop
- II Pause
- REC (recording standby). Next, press the play key to begin recording.

⑨ CD operation keys

Make the connections so that the CD player can be operated by the remote control unit.

- ▶ Play
- DISC** DISC selection
- Stop
- II Pause
- ◀, ▶ Track search

NOTE:

Note that the DISC selector key on the accessory remote control unit may not function, depending on the CD player used.

⑩ Timer operation keys

SLEEP: Sets the sleep timer. Each time you press this key, the setting changes as shown here. The current setting is shown on the tuner display.

Power turns off when your set time has elapsed.

If you press the SLEEP key during SLEEP operation, the display will show the time remaining till power turns off.

WAKE-UP: Timer playback setting/cancellation can be performed when the timer playback time has been set. This is shown in the tuner display section.

SNOOZE: Turns off power if pressed after timer playback begins. Timer playback begins again approx. 5 minutes later.

The amplifier section function automatically switches to the music source being operated when you press the CD playback (▶), cassette tape deck playback (◀, ▶), or tuner station controls.

To operate with the remote control unit, use the keys with the same function indicating symbols (for example ▶) as those shown on the components.

NOTE:

It is not possible to operate the CD player with the remote control unless the remote control cord is connected

Range of remote control

When the remote control unit is pointed at the remote sensor window on the tuner and any of its keys is pressed, the tuner and other components can be operated by remote control.

Distance: Within a range of approx. 7 meters from the remote sensor window on the tuner.

Angle: Within approx. 30 degrees from the center of the remote sensor window on the tuner.

Remote control will not be possible if there is an obstacle between the remote control unit itself and the remote sensor window on the tuner.

11. SPECIFICATIONS

Cassette tape deck amplifier: DC-Z82

AMPLIFIER SECTION

Continuous Average Power Output is 35 Watts* per channel, min., at 8 ohms from 40 Hertz to 20,000 Hertz, with no more than 0.3% total harmonic distortion.

**Measured pursuant to the Federal Trade Commission's Trade Regulation rules on Power Output Claims for Amplifiers.*

Music power	65 W + 65 W (1 kHz, T.H.D. 1%, 8 ohms)
Music power (DIN)	65 W + 65 W (1 kHz, T.H.D. 1%, 8 ohms)
Peak music power	350 W (8 ohms)
Continuous Power Output (DIN)	40 W + 40 W (1 kHz, T.H.D. 1%, 8 ohms)
Graphic equalizer frequency band	60 Hz, 150 Hz, 400 Hz, 1 kHz, 2.4 kHz, 6 kHz, 15 kHz, ± 7 dB
Signal-to-noise ratio (IHF, short-circuited, A network)	
PHONO	72 dB
Signal-to-noise ratio (DIN, continuous Power/50 mW)	
PHONO	68 dB/60 dB
Total Harmonic Distortion (40 Hz to 20,000 Hz, 20 W, 8 ohms)*	No more than 0.2%

Tape Deck Section

Systems	4 track, 2-channel stereo
Heads	Recording/playback head x 1 Playback head x 1 Erasing head x 1
Motor	DC servo 2 speed motor x 1
Wow and Flutter	No more than 0.09% (WRMS)
Fast Winding Time	Approximately 95 seconds (C-60 tape)

Frequency Response (– 20 dB recording):

Normal tape	35 Hz to 14,000 Hz ± 6 dB
CrO ₂	35 Hz to 15,000 Hz ± 6 dB
Metal tape	35 Hz to 16,000 Hz ± 6 dB
Signal-to-noise ratio	
Dolby NR OFF	56 dB
Noise Reduction Effect	
Dolby B type NR ON	More than 10 dB (at 5 kHz)

Furnished Parts

Operating Instructions	1
Remote control unit	1
Dry cell batteries	2

Miscellaneous

Power requirements

U.K. and Australian models	a.c. 240 Volts ~, 50/60 Hz
Other destination models	AC 110/120 - 127/220/240 V (switchable) 50/60 Hz

Power Consumption	288 W
-------------------------	-------

Dimensions	360 (W) x 287 (H) x 334 (D) mm 14-3/16 (W) x 11-5/16 (H) x 13-2/16 (D) in
